“DRIVSAFE – Distraction on the Road Injury eValuation in Surgery and FracturE clinics”

Distractions on the Road: Injury eValuation in Surgery and FracturE clinics (DRIVSAFE) project is a cross-sectional study design. The project involves a questionnaire administered to participants who present to an orthopaedic fracture clinic with an injury sustained within the past 6 months.

The questionnaire was designed to acquire data on patients experiences and perceptions of distracted driving, and also the amount and type injuries sustained by distracted driving. The aim is to accrue 1315 participants to help better understand the problem of distracted driving which, remains a growing source of morbidity and mortality across the globe.
